frontend developer

Profile

I am an experienced **frontend developer** building performant client side apps designed for humans. I'm mostly working with modern JavaScript tools like **React**, **Vue** and **Svelte**. Or just write plain **JavaScript** or **Typescript** code.

Experience

Remote freelance – Apr. 2020 - Present
As a freelancer I like to work on various mid-sized and small projects. Help to do some refactoring, maintain existing project or kickstart a new application.

Coinweb, Remote – May 2020 - Jul 2021
Mostly I worked with **React** on our **blockchain wallet** but also wrote some **React Native** and **nodejs** as well.

Docler Holding, Budapest – Oct. 2019 - May 2020
At Docler I worked on a **desktop application**s frontend. The app was written in C++ and QT, with an embedded browser view. We used **React** for UI and **Redux-Saga** to manage complex state changes of the application.

Ingatlan.com, Budapest – July 2018 - Sept. 2019
Ingatlan.com is Hungary's lead real estate site. Our team worked on the main site. We maintained a **huge legacy codebase** and turned it into a component based **responsive UI** with **Vuejs**. We used and developed our own Vue **component library** and style guide closely with our design team.

Skawa Innovation, Budapest – Sept. 2014 - June 2018
I worked on client side of our main project, Easyling. The app is a widely used online proxy translation tool. Our component based app was written in **Angular 1**, later we started to migrate it to **Angular 2** using **Dart** instead of Typescript.

Education

Web developer - Athéné SZKI., Budapest – 2012 - 2014
~~Industrial engineer~~ - Óbuda University, Budapest – 2011 - 2012
Graphic designer - Athéné SZKI., Budapest – 2009 - 2011

Skills

As a professional I like to work with new technologies. My strengths are JavaScript, Typescript, ES6-7-8..., frontend frameworks like React, Vue, Svelte, SPAs, WebExtensions. I have experience (and I like) to work with high-traffic websites/webapps.
